

✚ Task 1: Set up AWS Organizations for managing multiple AWS accounts.

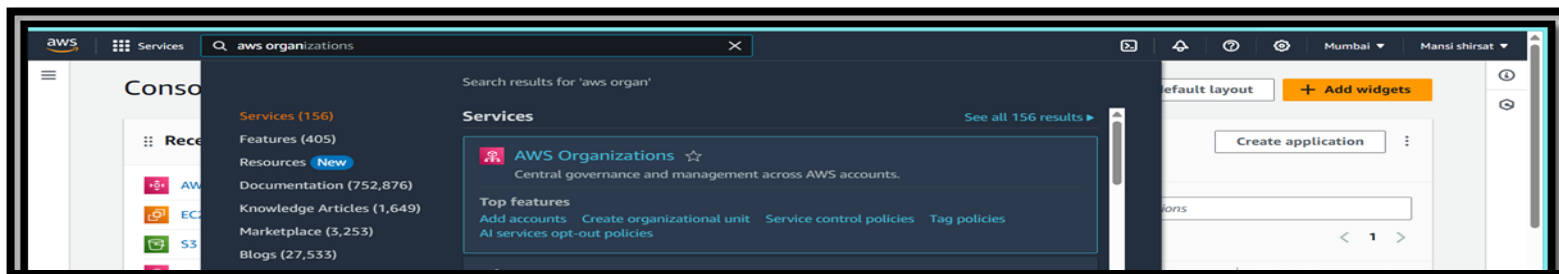

Create Organization

***Prerequisite:** To get started, you must first decide which of your AWS accounts will become the management account (formerly known as master account).

***Sign in as an administrator** to the AWS Management Console using the AWS account you want to use to manage your organization.

Go to the AWS Organization console: Click the [Create Organization](#) button.

Click the **Create Organization** button.

The screenshot shows the AWS Organizations console interface. The top navigation bar includes the AWS logo, a 'Services' menu, a search bar, and user information. The left sidebar contains a navigation menu with 'AWS Organizations' selected, showing sub-links for 'AWS accounts', 'Invitations', 'Services', 'Policies', 'Settings' (marked as 'New'), and 'Get started'. Below this, the 'Organization ID' is listed as 'o-pgauavrixh'. The main content area is titled 'Create organizational unit in Root' and includes a breadcrumb trail: 'AWS Organizations > AWS accounts > Root > Create organizational unit'. A descriptive paragraph explains that an organizational unit (OU) can contain both accounts and other OUs, enabling an inverted tree hierarchy. The 'Details' section contains a form for 'Organizational unit name' with the value 'multi-account strategy' entered. The 'Tags' section indicates that no tags are currently associated with the resource and provides an 'Add tag' button. At the bottom right, there are 'Cancel' and 'Create organizational unit' buttons.

Create organizational unit in Root

An organizational unit (OU) can contain both accounts and other OUs. This enables you to create an inverted tree hierarchy. The structure has a root at the top and branches of OUs that reach down. The branches end in accounts that act as the leaves of the tree. [Learn more](#)
